About this programme

BA (Hons) Psychology offers a rigorous, research-informed programme that equips students with the knowledge and skills to explore and understand why people think, feel and behave as they do, and can be utilised across a wide range of career paths that positively impact in the lives of others.

This programme will enable students to develop a critical awareness of human behaviour and reasoning behind mental processes. There is a focus on the major components and methods of enquiry within contemporary and classical psychology such as research methods, social and developmental psychology, health, crime and business. By covering these broad areas, it will allow students to apply theory and evidence-based approaches to examine real-world events on a national and global level and engage in current and future debates within the discipline. Crucially, this course provides students with sufficient breadth and depth of knowledge and practical skills that they can pursue a wide range of psychology related careers and further postgraduate study.

Careers

Graduate employment opportunities that might be available to graduates of the programme could include:

- Clinical Psychologist
- The Crown Prosecution service
- Health Psychologist
- Forensics
- Counselling (Adult/Child) and Youth Services

Key Features

- Demonstrate a sound knowledge of, and appropriately use a variety of quantitative and qualitative research methods to collect, analyse and interpret data conforming to ethical standards to progress towards becoming independent researchers.
- Demonstrate a comprehensive and informed understanding of contemporary issues in psychology to engage convincingly in debates about issues identified on a national and global scale.
- Critically evaluate psychological interventions and initiatives that can be used to support well-being, employee/employer relationships and implementation of relevant policies within business and organisational psychology.
